

Netcare Features

What each type of user can do in Netcare, by role.

Admin

- Create and manage staff accounts — doctors, nurses, lab staff and pharmacists.
- Control what each staff role can see and do, and change it at any time.
- Add new staff roles as the hospital needs them.
- View a log of actions taken across the hospital, showing who did what and when.
- Manage the hospital's profile, licences and the branding used on prescriptions and invoices.
- View and manage the appointment schedule across every doctor and department.
- Register a new patient with just a name and phone number.
- View billing and payment summaries for consultations, pharmacy and lab charges.
- Permanent deletion of a patient or clinical record is restricted, so it cannot happen by accident.

Doctors

- View a patient's complete history — past visits, vitals, prescriptions and lab results.
- Manage their own appointment schedule and mark themselves unavailable.
- Write prescriptions, automatically recorded under their own name.
- Order lab tests and review results before they are shared with the patient.
- Order medicines or injections for a patient.
- Conduct video consultations, scheduled on the same calendar as in-person visits.

Nurses

- Record patient vitals — blood pressure, temperature, weight and similar readings.
- View the day's appointment list and patient flow.
- Assist with coordinating appointments.

Lab & Pharmacy Staff

- Receive lab test orders directly from a doctor.
- Enter and share lab results, which the doctor reviews before the patient sees them.
- Manage medicine and injectable stock, including restocking and adjustments.
- Dispense medicines — the system checks stock and expiry before allowing it.

Patients

- Book their own appointments.
- View their own medical records, prescriptions and lab results.
- Pay bills online — consultation, pharmacy and lab charges.
- Receive notifications for appointments and results.
