NetCare
HOSPITAL MANAGEMENT SYSTEM
MANAGE BETTER. CARE BETTER.

Run your whole hospital on one platform.

Appointments, clinical records, IPD, pharmacy, lab, maternity and billing — on your own hospital address, live in a day.

1
platform

8
modules

1 day
to go live

Everything in one place

Front desk & scheduling

Appointments, doctor schedules, one-booking-per-day rule, fee schedule, video consult slots.

Clinical care

One chart per patient: records, prescriptions, vitals, specialty notes. Every entry carries the real signed-in author.

IPD & wards

Admissions, ward and bed management, nursing and progress notes, discharge summaries, IPD billing.

Pharmacy & inventory

Medicine and injectable catalogues, stock ledger, low-stock and expiry-aware dispensing.

Lab

Test catalogue, orders, results, and a separate review step before a report is released.

Maternity & child health

Pregnancy and ANC visits, babies linked to the mother, growth curves, immunization schedule.

Billing & payments

Server-generated invoices, consultation / pharmacy / lab summaries, Razorpay payments.

Trust & compliance

Licence-expiry tracking, DPDP-style consent records, audit log, role-based access.

Your own address. yourhospital.netcare.co.in — your logo, your colours, your landing page. **Your data stays yours:** each hospital sees only its own patients, staff and records.

Stop the leaks. Stay compliant.

Priced by the server
Fees come from your own schedule by visit type — never from the browser.

Dispense, then bill
Pharmacy, lab and consultation roll into clear summaries and invoices.

Honest stock
Dispensing is refused on short or expired stock. Low-stock alerts in advance.

Never miss a renewal
Drug licence, NABH, NABL, PCPNDT, HFR ID — tracked with expiry dates.

Consent & audit
Itemised, withdrawable consent designed around India's DPDP Act, plus a full audit log.

Right access, live
Permissions checked on every request; revoking one takes effect at once.

Built for maternity and child health

Pregnancy and ANC visits, babies linked to the mother's record from birth, growth tracked against standard curves, immunizations scheduled and ticked off, and guardian consent for minors — one continuous record instead of separate files.

Live in a day

1 We set up
Subdomain, branding, doctors, fees

2 We import
Patients and stock from Excel

3 We train
Reception to lab, in one session

4 You go live
We're on call in week one

COMING SOON — IN DEVELOPMENT

Patients will find you on netcare.co.in. We are opening the main site to the local public: people search for hospitals and doctors near them, see real open slots and book. Bookings land on your normal appointments board. You choose which doctors appear and can pause it any time.

Try it on your own hospital. We do the work.

A [30]-day pilot with setup and data import done for you. Simple monthly pricing — ask for a quote for your hospital's size.
